PROJECTS

LOGO DESIGN

For this assignment, I created a logo for the company Sanjid Designs. To achieve this, I conducted in-depth research to understand the owner's preferences. I discovered that his favorite animal is a lion, so I incorporated a lion into the design. Additionally, I included a paintbrush element to reflect the creative aspect of the company and give it a distinctive design look.

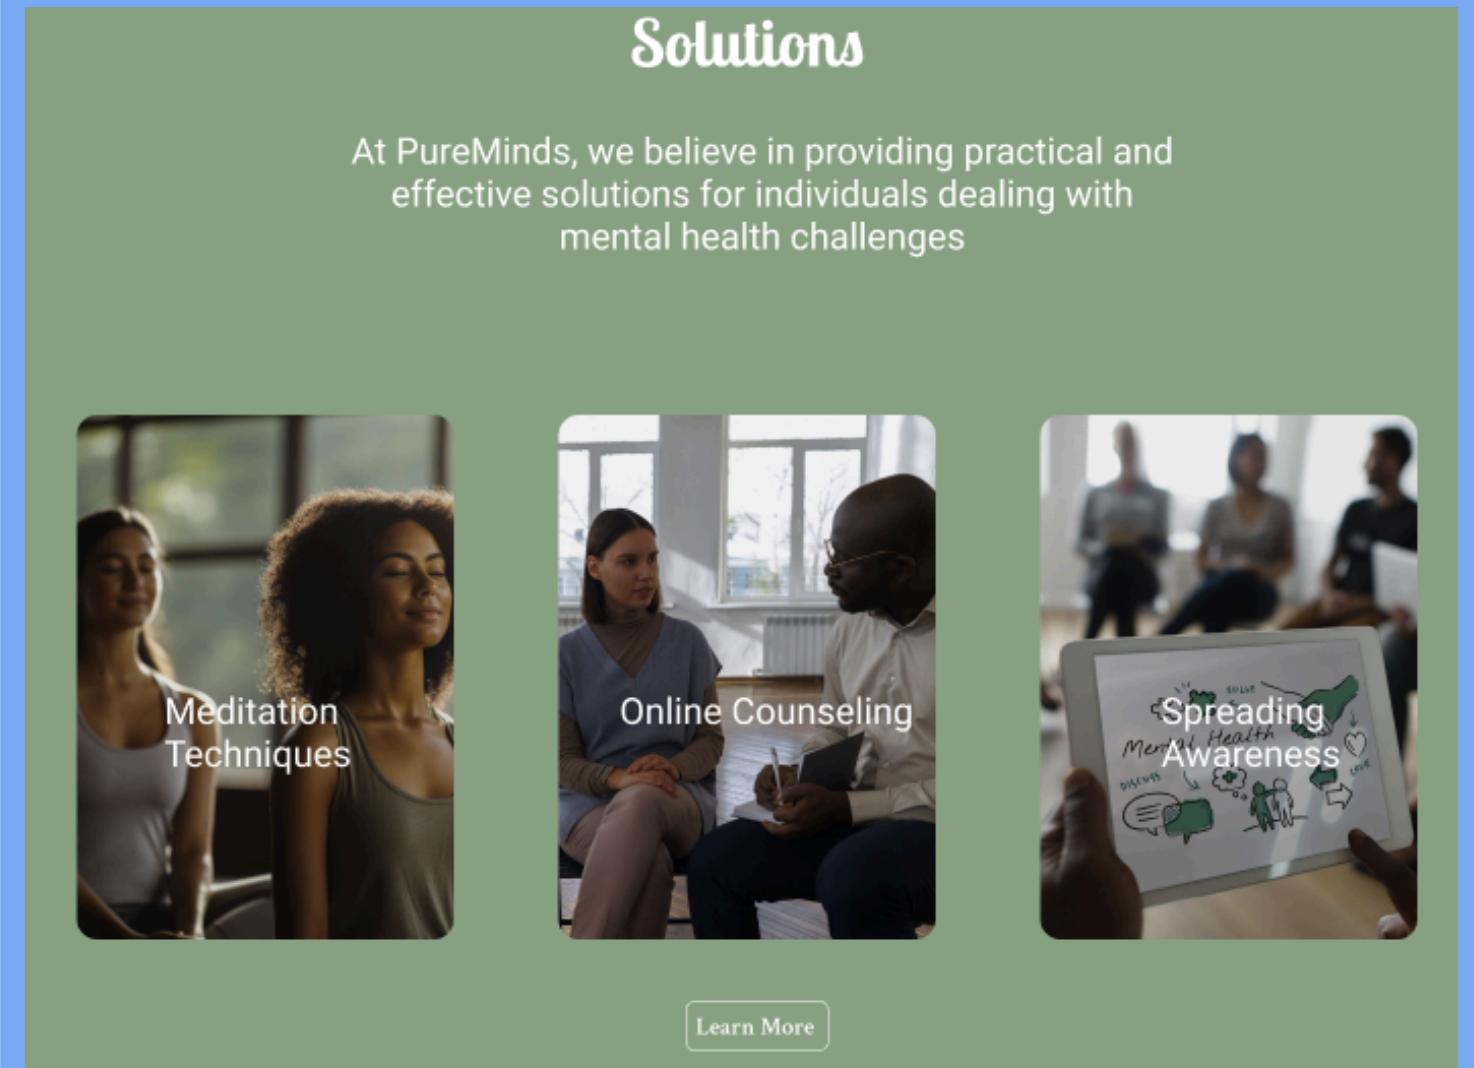

ECOMMERCE WEBSITE USING REACT

This e-commerce website was created as part of a subject called Multimedia Technology. I developed the site using React, and it allows users to select items, add them to their cart, and complete purchases.

PROJECTS

PURE MINDS WEBSITE

This website was created to help citizens access professional support for mental health issues. It also provides an option for people to contribute by donating to the cause, helping raise awareness and support for those in need. For this assignment i was responsible for creating the solution section of the website

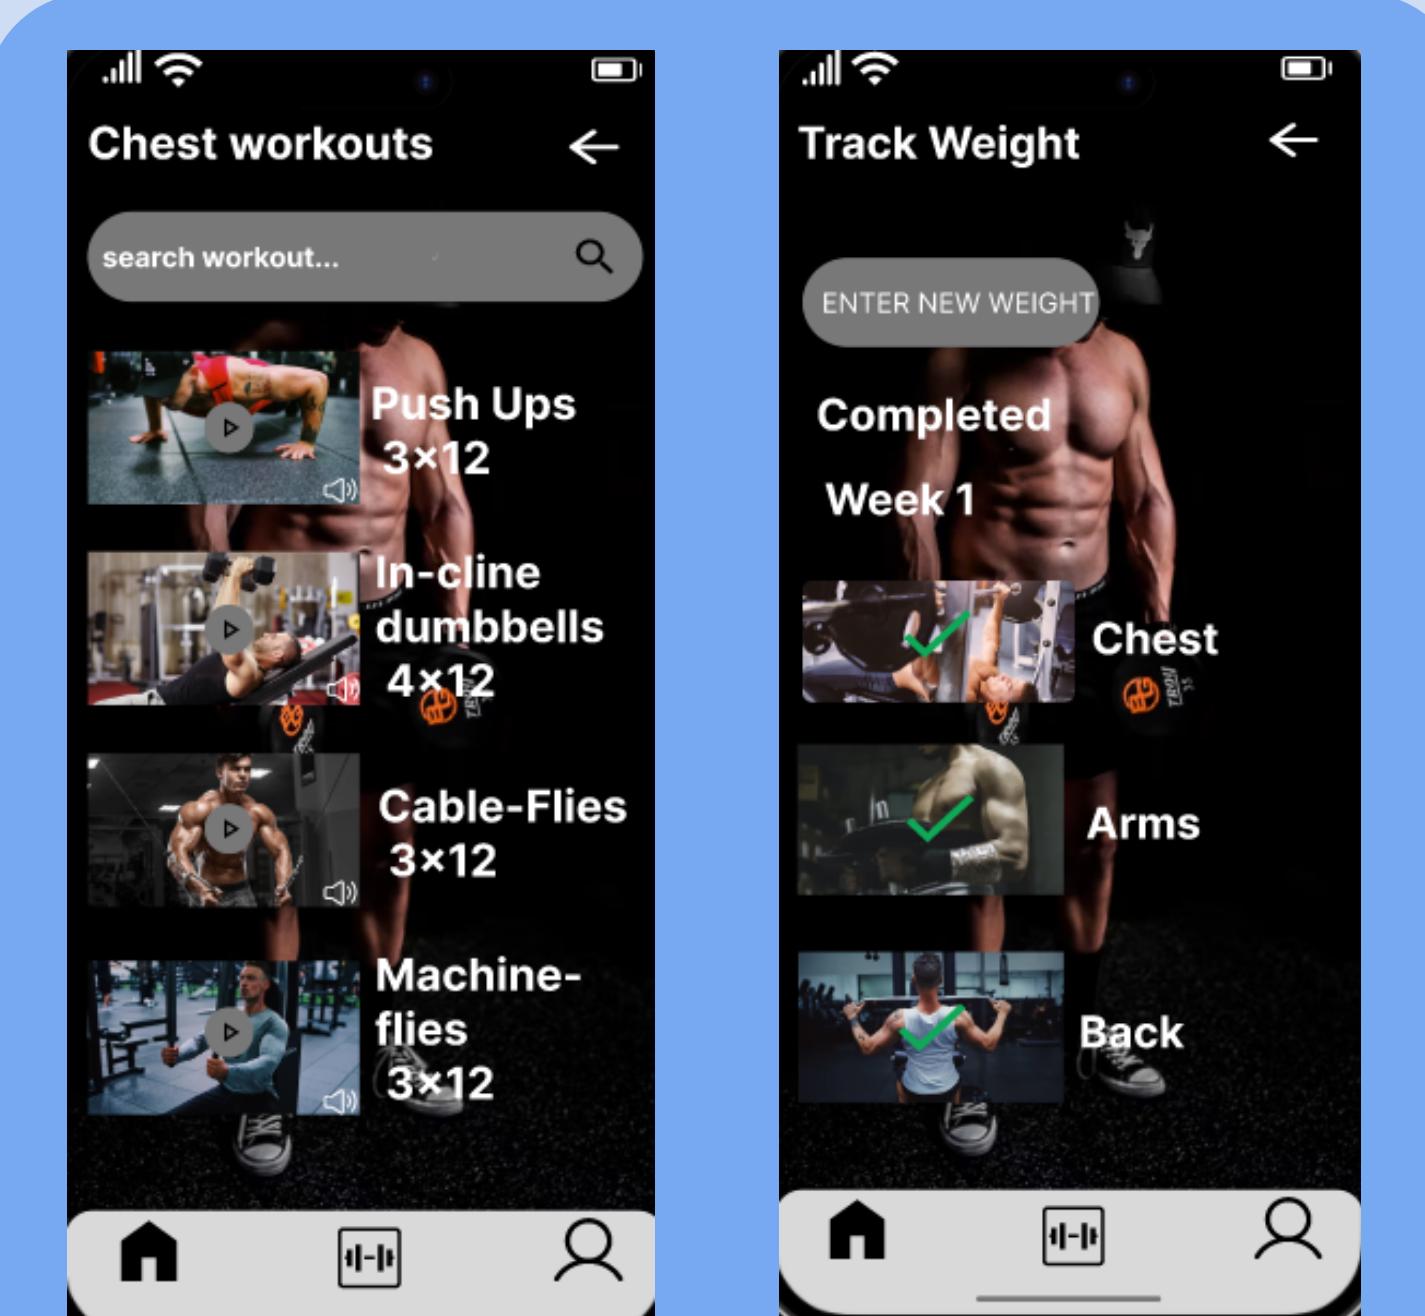

WORDPRESS TEMPLATE

This template was created using WordPress and custom-coded with javascript to enhance its functionality. The template allows users to easily make changes, providing both a user-friendly interface and flexibility for customization.

PROJECTS

GYM APP

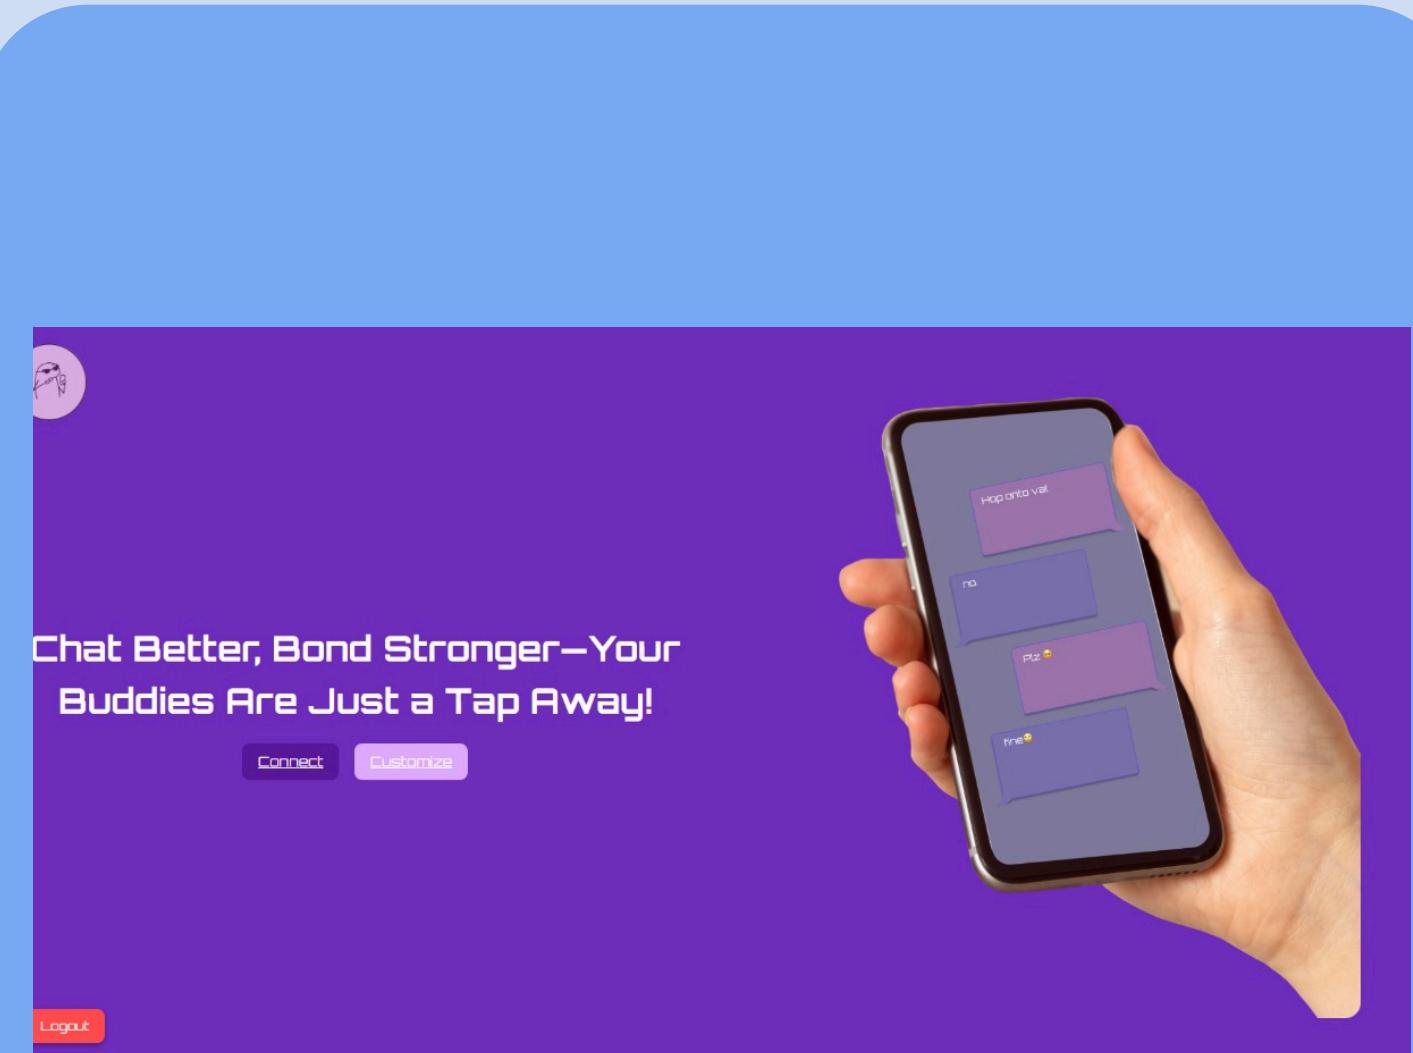

I created this gym app during my first year. It allows users to track their progress throughout their workout sessions and provides detailed instructions on how to perform various exercises.

HELPIFY

This image showcases "Helpify," a website I created to support individuals facing substance abuse. It promotes a "Support Meeting," encouraging users to seek help. The design includes meeting details and a registration button, connecting users with essential resources for overcoming addiction and mental health challenges.

PROJECTS

CHAT APP

For an assignment, along with teammates we created a desktop chat app that enables users to send messages to each other in real time. The app also allows users to delete and update their messages, enhancing the overall communication experience.

A screenshot of a web-based blog application. The top navigation bar includes "Blogmania", "Homepage", "Posts", and a user profile "saajid". On the left, there's a sidebar with a "Create a New Post" form containing fields for "Title" (with placeholder "I") and "Body" (with placeholder "Please fill out this field."). Below the sidebar, a blog post titled "The Whimsical World of Hello Kitty: Aatiqah's Adventures" is displayed. The post content reads: "Hey there, fellow adventurers! Today, I want to share with you my delightful escapades into the enchanting realm of Hello Kitty. Yes, you read that right! Hello Kitty isn't just a character; she's an entire universe of cuteness, creativity, and charm. Join me as I recount some of my most memorable Hello Kitty adventures! 🌈 First things first, let me tell you how it all began. As a child, I was captivated by the adorable little white cat with a bow. Her sweet demeanor and endless array of merchandise drew me into her world. From stationery to clothing to home decor, Hello Kitty seemed to be everywhere, bringing joy and cheer wherever she went. 🐱❤️ My love for Hello Kitty only grew stronger as I got older. So, when I had the chance to visit Sanrio Puroland in Tokyo, Japan, you can bet I jumped at it! Stepping into Puroland was like stepping into a dream. The entire place was a riot of color, with Hello Kitty and her friends".

BLOGMANIA

Using laravel, I developed a blog app called BlogMania that allows users to share their thoughts by posting articles. Users can also leave comments on these posts, fostering interaction and discussion within the community.
